Welcome to the 29th issue of Science in School

With the FIFA World Cup, football fever seems to be everywhere and it is amazing to think how much the game has changed since the first one in 1930. Back then, European teams made the long trip to Uruguay by ship and trained and exercised on board for over two weeks. Supporters back home would have read of their country’s progress in the newspapers but today we (and our less enthusiastic friends) can watch the game live almost anywhere in the world. This is made possible by the communication satellites that orbit our planet. As powerful it can be, modern technology can still go wrong and it is often when things go wrong that we notice how easy modern technology has made our lives. Natural events, such as solar flares, could make you miss that all important penalty kick by disrupting satellite communication and we explore the phenomenon in this issue (p.23) as well as discussing how astronomy can help us understand solar weather and the life cycle of stars (p.49).

Elsewhere, we look at both low and high tech advances. For example, while electricity will light the world cup stadiums in Brazil, we demonstrate how Brazilian mechanic Alfredo Moser used the principle of refraction to create a low cost lighting solution without it (p.18). We also explore the important role of water analysts (p.35) and show how to investigate water transport in plants – how can trees in the Brazilian rain forest grow so tall, the answer is in their internal structure (p.41).

Going even higher up we fly into the clouds and atmosphere onboard airplane laboratories with scientists that analyse the air they fly through (p.9). Beyond that, we look at how virtual clouds and data stored online can help us understand solar weather and the life cycle of stars (p.30). We also look at how EFDA-JET took a problem and turned it into a benefit, triggering small incidents in their plasma that could be controlled rather than waiting for larger more destructive events (p.13). 2014, of course, marks 100 years since the beginning of the first world war. When thinking of destructive events, there are few that are so seared into the European consciousness. To open our issue this month, we explore the complicated ethical history of chemist Fritz Haber. A Nobel Prize winner, Haber helped feed the world, yet the Haber-Bosch process facilitated the current rapid population explosion and today it uses 1% of all the energy produced. However, it is Haber’s war work that is most controversial and which we look at more closely (p.5).

Whether you flee the football this summer or follow it intently, we hope you also find something useful in this new issue.

About Science in School
The European journal for science teachers
Science in School is the only teaching journal to cover all sciences and target the whole of Europe and beyond. Contents include cutting-edge science, teaching materials and much more.

Brought to you by Europe’s top scientific research institutes
Science in School is published and funded by EIROforum (www.eiroforum.org), a partnership between eight of Europe’s largest intergovernmental scientific research organisations.

Inspiring science teachers worldwide
The Science in School website offers articles in 30+ languages and is read worldwide. The free quarterly journal is printed in English and distributed across Europe.

Advertising: tailored to your needs
Choose between advertising in our print journal, or on our website. For maximum impact, reach our entire readership with an advertorial (online and in print). Online and in print, we have a total of over 120 000 readers per quarter.

· The majority of our readers are secondary-school science teachers.
· Our readership also includes many primary-school teachers, teacher trainers, head teachers and others involved in science education.
· The journal reaches significant numbers of key decision-makers: at the European Commission, the European Parliament and in European national ministries.

For more information, see www.scienceinschool.org/advertising or contact advertising@scienceinschool.org

Subscribing
Register free online to:
· Subscribe to the e-newsletter
· Request a free print subscription (limited availability)
· Post your comments.

How can I get involved?
Science in School relies on the involvement of teachers, scientists and other experts in science education.
· Submit articles or reviews
· Join the referee panel
· Translate articles for publication online
· Tell your colleagues about Science in School
· Make a donation to support the journal.
See www.scienceinschool.org or contact us.
